

The Power Cropper

The Power Cropper is the only cropper in the UK that has 2 functions.

This is a very powerful machine which is suspended from the dipper arm of a 360° excavator. The Power Cropper can be used to cut through both concrete and rebar of a single or multi-bar precast pile. No chains provided. See specification sheet for more information.

Function 1

Using the Power Cropper enables the rapid reduction of excess pile and allows the waste to be put straight into a dumper truck or an allocated area of the site.

Function 2

Once the Power Cropper has sufficiently reduced the pile it can be used to 'nibble' the pile causing the concrete to fracture and the rebar to be exposed.

◀ Fast, clean pile cutting in confined areas with waste removed to safe area.

▲ The Power Cropper has been especially designed enabling it to be used in trenches and other confined spaces.

▲ The pre-cast pile is cropped then nibbled to final height leaving rebar undamaged and exposed.
